

## CommScope Infrastructure Academy Highlights

The CommScope Infrastructure Academy provides BusinessPartners, consultants and end users with a comprehensive range of training and certifications for infrastructure solutions. In this article, some of the features of the Commscope Infrastructure Academy's online training system are discussed that differentiate it from other training offerings and benefit you, CommScope users.

### *Important Features:*

- Time zone independent webcast format. Our online courses are available 24 hours a day, 7 days a week, enabling true global availability and consistency.
- Course material remains available to the user throughout the certification period, even after courses are completed. Most online courses on the market disappear from the user once they complete the course. CommScope courses are available to users for the entire certification period, allowing users to revisit course material at any time.
- Course material that is dynamically updated, keeping users informed of changes as they occur. The online training method means education is a continuous process rather than a 'one-hit' event every couple of years.
- Student assessments that provide users with instant feedback. We give users the incorrect answers as well as the correct ones and the reasons why, so assessments are part of the learning process and not just a test of knowledge.
- Users can learn at their own pace and convenience - in essence, training on demand. The system enables users to adapt their learning to their current work commitments and environment.
- The webcast format offers Voice on/off, a Print feature, and Feedback options. Every user has their preference in how they digest the learning material.
- Downloadable files, such as videos, are available for each course containing information that support and reinforce course material.
- Courses are available with subtitles in many languages, including English, Spanish and Chinese
- New courses are added on a regular basis keeping users up to date with and qualified in the latest infrastructure technology.

In addition to the features of the system, the Commscope Infrastructure Academy also helps end users find the right expertise through qualification. Photo ID badges and/or certificates are issued upon completion of courses, and we recommend these are used as recognition of expertise by customers. In addition, the BusinessPartner Locator on the CommScope website has the facility to search for companies with qualified personnel in the various specialist courses, again a feature end users can use to find relevant expertise in their area.
