

CommScope Makes Environmental Stewardship Part of its Advanced Network Connectivity Technologies

CommScope Leads Companies to Greener Network Infrastructures

Our customers need solutions that can help them manage potentially environmentally-damaging resources better while still addressing their business and technology needs. Through our ability to develop structured, reliable, durable, intelligent and advanced network infrastructure solutions, we at CommScope Enterprise Solutions are providing you with opportunities to minimize energy consumption and long-term waste throughout the network. From creating products that are engineered to outlast multiple generations of network equipment to offering integrated solutions that run on a single network to providing unparalleled vision and control to more efficiently manage existing resources, our network infrastructure solutions can make a positive change for your business and the environment.

CommScope Remains Committed to Reducing Own Environmental Impact

In addition to helping our customers, we are also focused on environmental stewardship - one of CommScope's longtime fundamental values. Encouraging our employees to apply greener business practices - recycling, hazardous waste disposal compliance and voluntary reporting of greenhouse gases - are only a few examples of our commitment to thinking and acting smarter, better and long-term about managing our resources.

In 1988, we introduced our award-winning ReelSmart® recycling program that enabled us to reuse more than 100,000 cable reels annually, effectively saving approximately 29,000 trees. Yearly, CommScope recycles more than 50 million pounds collectively of metals, plastics, paper and packaging materials and conserves more than 25 million gallons of water by controlling evaporative losses. As we embrace emerging technologies and maintain our global leadership role in IT solutions, environmental stewardship remains at the forefront of day-to-day operations.

CommScope Production Facilities Achieve ISO 14001 Certification

For many companies, International Standards Organization (ISO) 14001 certification may become a contractual requirement of customers in both the United States and Europe. Furthermore, CommScope and similar companies that meet ISO 14001 standards maintain a competitive edge in the marketplace by showing a concern for reducing our environmental impact. ISO 14001 is a framework that inspires all members of an organization to think "greener" and reduce negative environmental impact.

Our various environmental initiatives have helped 14 global manufacturing facilities receive ISO 14001 certification. This standard distinguishes a system of practices that minimize environmental impact and analyzes programs for recycling, waste reduction, chemical management, waste disposal, emissions and others. By adopting the ISO environmental standards, CommScope is following stringent international standards that independently pledge to be a responsible corporate citizen and practice effective conservation.
